For the example below we have one big table. Put the table in normalized form.

OID = Order ID, O_Date= Order Date,
CID = Customer ID, C_Name = Customer Name, C_State = Customer's State,
PID = project id, P_Desc =Project Name, P_Price = Product Price, Qty = Quantity Purchased

Note: 7, 5, 4 means three Product IDs. Similarly, 1, 1, 5 means three Quantities.

Functional Dependencies are:

OID -> O_Date CID -> C_Name PID -> P_Desc PID -> P_Price
OID -> CID CID -> C_State PID and OID -> Qty

OID	**O_Date**	**CID**	**C_Name**	**C_State**	**PID**	**P_Desc**	**P_Price**	**Qty**
1006	10/24/09	2	Apex	NC	7, 5, 4	Table, Desk, Chair	800, 325, 200	1, 1, 5
1007	10/25/09	6	Acme	GA	11, 4	Dresser, Chair	500, 200	4, 6

Put the above table in 1NF Tables

Put the above table in 2NF

Put the above table in 3NF Tables

Final set of Tables with meaningful names and PKs and FKs
