

DDL Alter & Drop Exercise

1. In the Patient table, change the maximum length for Patient's names to be 35 characters long.
2. In the Patient_Treatment table, add a column called "Dosage" where the amount of the treatment given will be stored. This column is a fixed numerical value with a maximum of 99. This column cannot be null and the default value should be "0".
3. In the Treatment table, change the column name "T_Name" to be "Treatment_Name".
4. Remove the Treatment table from the database.
5. Remove the foreign key constraints from PID_PT and TID_PT columns in the Patient_Treatment table.
